

# Testdrop Pro

## Water Contamination Detector

The most convenient and inexpensive way to regularly test your water for contaminants. Whether you are hiking outdoors, travelling abroad or just interested to know what is coming out of your own tap. TestDrop is here to provide answers.

- Test for many different contaminants
- Reusable for thousands of tests
- Complete test in 2 seconds
- Breakthrough patented technology
- Mobile app for more detailed information
- Test natural, tap and bottled water
- Accurate and Affordable

## FEATURES

### ✓ Electric Field Based Measurement

The sensor can determine the quality of the water by the electric field it measures around the cup.

### ✓ Contaminants

Protein, heavy metals, bacteria, organic pesticides and other materials interfere with the charging of the cup, leading to different fields.

### ✓ Data Capture & Reporting

See your sampling history and the time and location of each test as well as a results graph and the likelihood your water is contaminated.

### ✓ Instructional videos

Instructional videos online train users without additional documentation.

### ✓ Easy to Use

Simple and straightforward. With a click of a button and intuitive features on the app, everyone can become a water scientist.

### ✓ Environmentally Friendly

Minimal waste, no harmful reagents or special disposal requirements. Just use a recyclable plastic cup.
